OpenLogic

PERFORCE

Long-Term and Technical Support for CentOS 6, 7, and 8

Migrating off CentOS requires time and careful planning. If you need to stay on CentOS past end-of-life, keep your deployments secure and protect your infrastructure with patches and expert support from OpenLogic.

Extend Your Migration Runway and Stay Secure and Compliant

Can't migrate right away? CentOS LTS from OpenLogic includes patches for CentOS core and base packages that fix high severity CVEs (CVSS score 7 or higher). OpenLogic's releases are fully tested and signed packages available via our secured private repository.

CentOS LTS is available for a minimum of 5 years beyond community EOL — so you can remain securely on CentOS while determining next steps.

Version	OpenLogic LTS
CentOS 6	Through 2025
CentOS 7	Through 2029
CentOS 8	Through 2026

Get 24/7 Technical Support From Real Linux Experts

Need more than just patches? With CentOS technical support, you'll work directly with Linux experts who have at least 15 years of enterprise IT experience.

With guaranteed SLAs for response and resolution time up to 24/7/365, your support cases will get resolved quickly. Plus, there's no limit on support tickets or developers who can submit them.

Receive Unbiased Guidance — No Strings Attached

As part of our technical support, our Enterprise Architects can help you explore CentOS alternatives and possible migration paths. Our dedicated Enterprise Linux team can answer questions and provide recommendations while you evaluate and plan your transition to an alternative Linux distribution.

Unlike our competitors, OpenLogic doesn't sell software and is not affiliated with any commercial Linux entities — so you can be sure we'll always recommend what's best for your business and not our bottom line.

Why Partner With OpenLogic?

For over 20 years, OpenLogic has been helping organizations navigate major EOL events like this one. CentOS support isn't all we do; we provide technical support for more than 400 open source technologies, including all major Linux distributions. We also offer competitive pricing with no setup fees or surprise charges.
